# DIFFERENCES BETWEEN OUR FREE & PREMIUM PLANS

**vs.**

## **PREMIUM 10'x20' PLAN**

- 30+ detailed 3D schematics
- Views from all angles
- Measurements for every part
- Full layouts for every step
- Step-by-step assembly instructions
- Full material / shopping list
- Full cutting list
- PRO-TIPS for every section
- Mobile / Tablet ready
- Designed for newbies and pro's

## **FREE 10'x20' PLAN**

- Basic schematics
- Basic angles
- Basic measurements
- Basic layouts
- Simplified instructions

# 1 BASIC OVERVIEW AND DIMENSIONS

This 10 x 20 is a large size shed that is perfect for storing your supplies and spending leisure hours. It is a storage shed with a garage door, entrance door and 2 windows. The overall height of the shed is 12 feet including the roof and the width is 10 feet and 1 inch from the front. The width from the right side is 20 feet and 1 inch while the depth is 21 feet and 7.5 inches. There are two windows on the right wall, each with a measurement of 3x3. The front door needs to be 6 feet and 8.5 inches in height and 3 feet and 8 inches in width.

**FRONT VIEW**

**DOOR**

**SIDE VIEW**

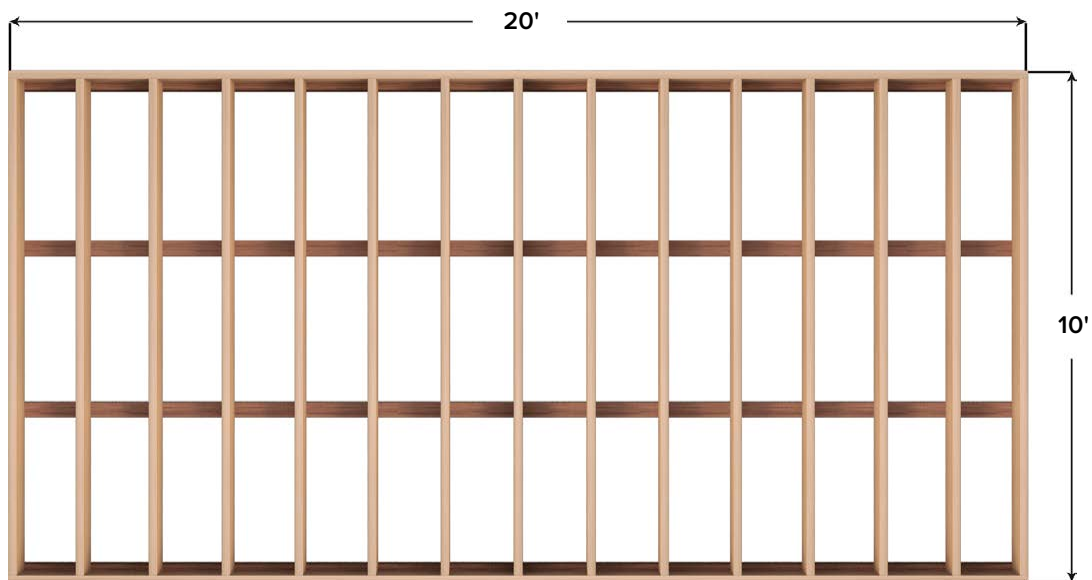

**WINDOW**

## NOTE

Use old doors and windows to save money. Follow manufacturer's instructions to accurately install the doors and windows.

## 2 FOUNDATION AND FLOOR

You will start with building the foundation and the floor of the shed. Note that the foundation needs to be resilient and accurately designed. Since your shed's entire load will be on the foundation, you need to make sure it is built right. You will use pressure heated timber to create skids as shown in the figure. The width of the foundation should be 20 feet and the height should be 10 feet. Use  $\frac{3}{4}$  inches thick tongue and groove plywood for the floor.

FOUNDATION BASE

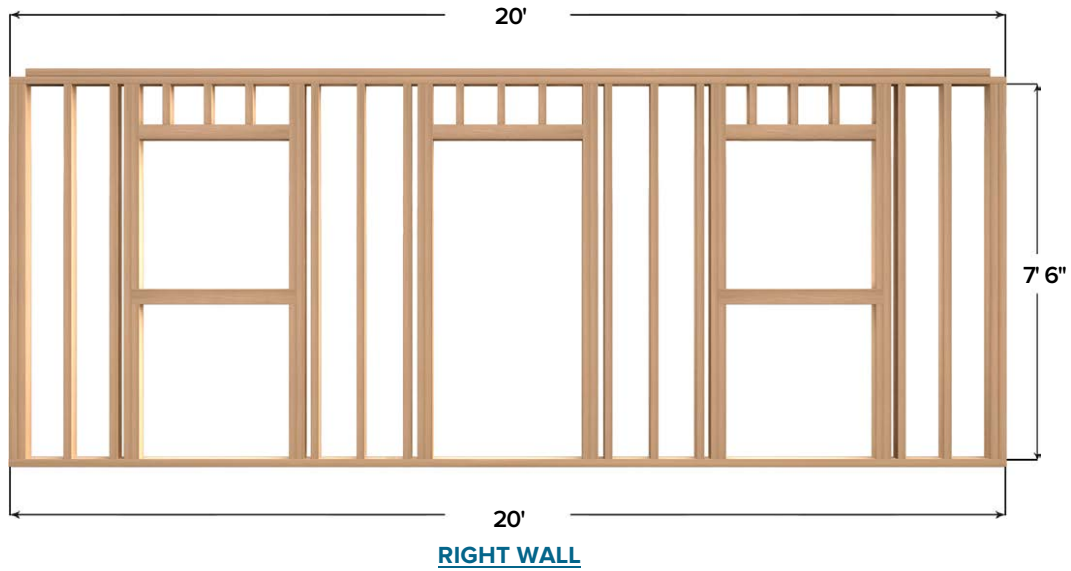

FLOOR

### NOTE

Buy pre-designed joists and skids if you are new to building sheds. This way, you will reduce the chances of any complications in sizing and spacing.

### 3 WALL STRUCTURES

Once the foundation and floor is built, the next step is to start building the wall structures. You will use pressure heated timber to build the right and the left wall. The width of both the walls should be 20 feet and the height should be 7 feet and 6 inches. The right wall will have openings for the front door and the two windows.

#### NOTE

Add self-adhering flashing on the bottom edges of the windows before installing T1-11.

## 4 WALL STRUCTURES

Once the right and the left walls are built, the next step is to start building the front and back wall. The width of the top plate of the walls should be 10 feet while the bottom plate's width should 9 feet and 4 inches. The height of the walls should be 7 feet and 6 inches. Use pressure heated timber to build the structures.

### NOTE

Make sure the edges of T1-11 do not overlap each other as this will compromise the functioning and appearance of the T1-11.

## 5 ROOF SECTION

After building and installing the walls, start building the roof. Note that roofing is quite a strenuous task which is why we recommend acquiring additional help for the process.

You will build 12 rafters each side and install them as shown in the image. The rafters will be spread over a width of 20 feet 7 inches.

### NOTE

Follow the manufacturer's instructions carefully while installing the shingles. Get additional help for the roofing task to safely get the job done.
