# 1 BASIC OVERVIEW AND DIMENSIONS

This 8 x 6 gable shed will add value to your property since it is exquisite and spacious enough to contain your garden supplies. It is a mid-size gable shed perfect for medium to large gardens. The shed has a height of 9 feet and 8.5 inches along with the roof and a width of 6 feet and 1 inch from the bottom plate. The shed has a 1 feet and 10 inches wide and tall window along with a single door of 2 feet and 7 inches width and 5 feet and 8 inches height. The overall shed depth is 8 feet and 4 inches from the top plate and 8 feet and 1 inch from the bottom plate. In order to save your hard earned cash, you can use your old doors and windows for the shed.

**FRONT VIEW**

**DOOR**

**SIDE VIEW**

**WINDOW**

## NOTE

Use old doors and windows to save money. Follow manufacturer's instructions to accurately install the doors and windows.

## 2 FOUNDATION AND FLOOR

The first step of building this 8 x 6 gable shed is building the foundation. Note that the foundation is the most crucial area of your shed and it needs to be accurately designed and built. The foundation will hold the entire weight of the shed and therefore it needs to be resilient. The overall length of the foundation would be 8 feet while the width would be 6 feet. You will use pressure treated skids and joists to build the foundation.

You will use  $\frac{3}{4}$  inches tongue and groove plywood for the flooring.

**FOUNDATION BASE**

**3/4" Tongue and Groove Plywood**

**FLOOR**

### NOTE

Buy per-designed joists and skids if you are new to building sheds. This way, you will reduce the chances of any complications in sizing and spacing.

### 3 WALL STRUCTURES

After building the foundation, you will start working on the wall structures. The right wall will have a width of 8 feet from the bottom plate and a height of 6 feet. Similarly, the left wall will have 8 feet width and 6 feet height. Leave out the space for the window on the right wall. Follow manufacturer's instructions to install the window properly.

**FRONT WALL**

**BACK WALL**

#### NOTE

Add self-adhering flashing on the bottom edges of the windows before installing T1-11.

## 4 WALL STRUCTURES

Once you have built the right and the left wall, you will start working on the front and the back wall. The height of both the walls should be 6 feet. The width from the bottom plate would be 5 feet and 4 inches and 6 feet from the top plate. Use pressure treated timber joists and trusses to build the wall structures. Leave out the area for the door to be installed as shown in the figure. Follow manufacturer's instructions to install the door properly.

**FRONT WALL**

**BACK WALL**

### NOTE

Make sure the edges of T1-11 do not overlap each other as this will compromise the functioning and appearance of the T1-11.

## 5 ROOF SECTION

After the walls are built and fixed on the foundation, you will start working on the roof. The roof will have 8 rafters of 3 feet and 8.25 inches diameter. Make sure the trusses are spaced equally on a width of 8 feet. Once you have built and installed the trusses and the rafters, start working on the shingles. Use asphalt shingles for maximum durability and easy installation.

It is recommended to get additional help for the roofing section as it can be strenuous.

### NOTE

Follow the manufacturer's instructions carefully while installing the shingles. Get additional help for the roofing task to safely get the job done.
